

[Ala2] Met-Enkephalin, amide

PRODUCT DESCRIPTION

[Ala2] Met-Enkephalin, amide is a 7-amino-acid An endogenous opioid pentapeptide that binds delta-opioid receptors (DOR) with high affinity and mu-opioid receptors (MOR) with moderate affinity. Enkephalins mediate analgesic, anxiolytic, and reward signaling in the central and peripheral nervous systems. Used in pain, addiction, and neuropharmacology research for studying opioid receptor selectivity, signaling mechanisms, and non-addictive analgesic development.
